

9

1

identifying as a function of said time-stamp a machine storing a version of said electronic document for a time period corresponding to said time-stamp; and transmitting said electronic document corresponding to said time-stamp from said identified machine.

- 2. (Not Amended) The method according to claim 1, wherein an address 1 2 identifying said electronic document includes said time-stamp.
- 1 3. (Not Amended) The method according to claim 2, wherein said address is a Uniform Resource Locator ("URL"). 2
- 4. (Not Amended) The method according to claim 3, wherein said 1 Uniform Resource Locator ("URL") has an associated request header for indicating said 2 3 time stamp.
- 5. (Not Amended) The method according to claim 1, further comprising 1 the step of transmitting the version of said electronic document with the most recent time-2 3 stamp preceding the requested time-stamp if a version of said electronic document does not exist with the requested time-stamp. 4
- 6. (Not Amended) The method according to claim 1, wherein said 2 request is specified using a browser.
- 7. (Not Amended) The method according to claim 1, wherein said time-1 2 stamp is a relative time-stamp.

1	8. (Amended) A system for storing an electronic document having
2	multiple versions, each of said versions identified by a time-stamp, said system
3	comprising:
4	a memory for storing said multiple versions of said electronic document in
5	an archive of electronic documents; and
6	a processor operatively coupled to said memory, said processor configured
7	to:
8	receive a request for said electronic document, said request including a
9	time-stamp;
10	identify as a function of said time-stamp a machine storing a version of
11	said electronic document for a time period corresponding to said time-stamp; and
12	transmit said electronic document corresponding to said time-stamp from
13	said identified machine.

- 9. (Not Amended) The system according to claim 8, wherein an address identifying said electronic document includes said time-stamp.
- 1 10. (Not Amended) The system according to claim 9, wherein said address 2 is a Uniform Resource Locator ("URL").
- 1 11. (Not Amended) The system according to claim 10, wherein said
 2 Uniform Resource Locator ("URL") has an associated request header for indicating said
 3 time stamp.
- 1 12. (Not Amended) The system according to claim 8, wherein said request 2 is specified using a browser.

1	13. (Not Amended) The system according to claim 8, wherein said
2	processor is further configured to transmit the version of said electronic document with
3	the most recent time-stamp preceding the requested time-stamp if a version of said
4	electronic document does not exist with the requested time-stamp.
1	14. (Not Amended) The system according to claim 8, wherein said time-
2	stamp is a relative time-stamp.
1	15. (Amended) An article of manufacture for accessing an electronic
2	document, said electronic document having multiple versions, each of said versions being
3	identified by a time-stamp, said article of manufacture comprising:
4	a computer readable medium having computer readable program code
5	means embodied thereon, said computer readable program code means comprising
6	program code means for causing a computer to:
7	receive a request for said electronic document, said request including a
8	time-stamp;
9	identify as a function of said time-stamp a machine storing a version of
10	said electronic document for a time period corresponding to said time-stamp; and
11	transmit said electronic document corresponding to said time-stamp from
12	said identified machine.
1	16. (Amended) A method for resolving a domain name, said method
2	comprising the steps of:
3	receiving a request for an electronic document associated with said
4	domain name, said electronic document having multiple versions, each of said versions
5	being identified by a time-stamp, said request including a time-stamp;
6	identifying as a function of said time-stamp a machine corresponding to a
7	version of said domain name for a time period corresponding to said time-stamp; and
8	transmitting an indication of said identified machine storing said
9	electronic document corresponding to said time-stamp.

17. (Amended) The method according to claim 16, wherein an address	SS
identifying said electronic document includes said time-stamp.	

1 18. (Not Amended) The method according to claim 17, wherein said address is a Uniform Resource Locator ("URL").

- 1 19. (Not Amended) The method according to claim 18, wherein said
 2 Uniform Resource Locator ("URL") has an associated request header for indicating said
 3 time stamp.
- 20. (Not Amended) The method according to claim 16, wherein said request is specified using a browser.
 - 21. (Not Amended) The method according to claim 16, wherein said time-stamp is a relative time-stamp.

22. (Amended) A system for resolving a domain name, said system

2 comprising:

a memory for storing a database identifying a machine storing an electronic document corresponding to said domain name for a plurality of time periods;

5 and

1

2

1

a processor operatively coupled to said memory, said processor configured

7 to:

14

15

receive a request for an electronic document associated with said domain
name, said electronic document having multiple versions, each of said versions being
identified by a time-stamp, said request including a time-stamp;

access said database as a function of said time-stamp to identify a machine corresponding to a version of said domain name for a time period corresponding to said time-stamp; and

transmit an indication of said identified machine storing said electronic document corresponding to said time-stamp.

1	23. (Not Amended) The system according to claim 22, wherein an address
2	identifying said electronic document includes said time-stamp.
1	24. (Not Amended) The system according to claim 23, wherein said
2	address is a Uniform Resource Locator ("URL").
1	25. (Not Amended) The system according to claim 24, wherein said
2	Uniform Resource Locator ("URL") has an associated request header for indicating said
3	time stamp.
1	26. (Not Amended) The system according to claim 22, wherein said
2	request is specified using a browser.
	27 (NIat Amendal) The section of 1' (1' 20' 1' 20' 1')
	27. (Not Amended) The system according to claim 22, wherein said time-
1	
2	stamp is a relative time-stamp.
2	stamp is a relative time-stamp.
1	stamp is a relative time-stamp. 28. (Amended) An article of manufacture for resolving a domain name,
1 2	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising:
1 2 3	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code
1 2 3 4	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising
1 2 3 4 5	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to:
1 2 3 4 5 6	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to: receive a request for an electronic document associated with said domain
1 2 3 4 5 6 7	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to: receive a request for an electronic document associated with said domain name, said electronic document laving multiple versions, each of said versions being
1 2 3 4 5 6 7 8	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to: receive a request for an electronic document associated with said domain name, said electronic document laving multiple versions, each of said versions being identified by a time-stamp, said request including a time-stamp;
1 2 3 4 5 6 7 8	28. (Amended) An article of manufacture for resolving a domain name, said article of manufacture comprising: a computer readable medium having computer readable program code means embodied thereon, said computer readable program code means comprising program code means for causing a computer to: receive a request for an electronic document associated with said domain name, said electronic document laving multiple versions, each of said versions being identified by a time-stamp, said request including a time-stamp; identify as a function of said time-stamp a machine corresponding to a
